

What makes Renew + Unique?

Renew + features our CMDS or "Colloidal Mineral Delivery System" which carries the Collagen to where the body needs it most!

In the past, one could only purchase colloidal minerals contained within a liquid source, such as Glacier Milk or high priced substitutes which require refrigeration after opening. Now, through a new exclusive proprietary formulation exclusive to LMC Ventures, these minerals can be extracted from an aqueous solution in their original ionic form, then mixed homogeneously within a matrix of pure collagen which acts as a separating agent to keep the freed, dried, colloidal minerals in suspension. (Each Renew + capsule is packed under a controlled pressure so as not to re-compress the mix). The body's own digestive fluids re-hydrogenate the mixture. As the collagen expands, it keeps within its matrix the colloidal minerals, thus acting as a time-release mechanism. The colloidal minerals, in turn, help in the digestive system's ability to carry and retain the collagen where needed within the body. Collagen forms a network of protein fibers that lay down the structural foundation for many tissues, including cartilage, bone, tendons and muscles, all necessary to keep joints strong and operating smoothly.

Renew + was created to help re-establish normal bodily functions by helping to fulfill your essential needs for Collagen plus Colloidal minerals. Each capsule contains our won proprietary blended formulation of 100% pure U.S. certified kosher bovine collagen plus an assortment of seventy-seven 100% natural plant derived colloidal minerals.
